- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) ☐ Notice of Informal Patent Application (PTO-152)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 2. 6) ☐ Other:

1. The disclosure is objected to because of the following informalities:

on page 1, line 25, "made and" should be deleted;

on page 2, line 7, "print the spots" is unclear;

on page 7, line 26, change "line" to -- line --;

on page 8, line 7, "make or" should be deleted.

in claim 3, change "make" to -- cover --.

Appropriate correction is required.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kimizuka (JP# 11-100134) in view of Takahashi (JP# 03-18530).

Kimizuka teach a printer having a substrate tray 1 which side aligning paper guides 28 which can be moved to a closed (home) position to an open (feeding) position. A latch mechanism included a stud 24c which is rotatable along an axis "x" has a flag 24a attached so as to be rotatable in a clockwise and anti-clockwise direction. A sensor 25 detects the presence of this flag. When a copy sheet or bundle

is loaded into the tray, the sensor will detect the absence of the flag and will determine that sheets are present in the tray. Specifically, Kimizuka teach everything claimed except indicating the sensor signal on a display.

Takahashi teach a printer having a paper tray 21 and paper sensors MS1 – MS4 which detect the presence and size of the paper. When a paper and size are detected on the tray, it will be displayed on a display on a control panel. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Kimizuka so that the size or presence of a sheet loaded on the tray is displayed on a control panel because operational ability and practicability will be enhanced as taught in Takahashi.

3. Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. Claims 6-7 are allowable over the prior art of record.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Elgee, Natsume et al., Nakamura et al., Kazakoff, Tsuji et al., Okuda (JP), Kato (JP), and 2001-30589 (JP) all teach various paper trays with width adjusters or paper sensors.
